Fully Vaccinated US COVID-19 deaths from late June 2021 – early August 2021

by Anthony of Boston

From June 21st 2021 – August 2nd 2021, the number of breakthrough COVID-19 deaths among "fully vaccinated" doubled from 750 to 1507. I used the internet archive's wayback machine https://archive.org/web/ to access the data from the CDC website. Here is the CDC data for breakthrough cases and deaths as of June 21, 2021 as it was captured.

According to the CDC, as of June 23 2021 from the beginning of the pandemic, a total of 600,442 COVID-19 deaths have been reported. (scroll down to "Deaths")
https://web.archive.org/web/20210630010730/https://www.cdc.gov/coronavirus/2019-ncov/covid-data/covidview/index.html

According to the CDC, as of August 4, 2021, a total of 612,958 COVID-19 deaths have been reported.
https://web.archive.org/web/20210807132437/https://www.cdc.gov/coronavirus/2019-ncov/covid-data/covidview/index.html

In between June 23rd, 2021 and August 4th 2021, there were around 12,500 total deaths in the US caused by COVID-19

So roughly only 6% of those who died during the COVID-19 surge from June 23, 2021 to early August 2021 were fully

Fully Vaccinated COVID-19 deaths from late June 2021 – early August 2021

vaccinated. The other 94% were either partially vaccinated or unvaccinated. This data shows that the vaccines, even during the Delta surge, offered significant protection over non-vaccination.
